

New and Enhanced Features

- Implemented 4th generation stitching technology to existing PanaCast 2
- Free Intelligent Zoom upgrade: all users can enable Intelligent Zoom with this new firmware release
- ZoomRoom App and ZoomRoom Portal integration of Intelligent Zoom
- Single unified firmware supporting both PanaCast 2 and PanaCast 3

Below are issues /observations which are known at this point in time, when PanaCast 2 and PanaCast 3 running firmware Version 3.6 and tested on and tested on MacBook Pro (10.14.1 Mojave) and iMac (10.13.6 High Sierra) platforms in PLUG-N-PLAY (PnP) mode.

Known Issues:

- Win & Mac: Applied Color Controls in the video stream are NOT persistent when switched between internal & PanaCast cameras (BUG 2838)

MAC	Issue Details	Status	Repro	Workaround
2892	No video displayed (Black screen) after doing multiple times Unplug and Plug. But sometimes after doing Video stop/start, video feed started	OPEN	Random	Either stop or start the video in the conference or unplug and plug the camera will resolve the issue
2907	IZ is not working when user turns OFF IZ and does Manual Full Zoom and then turns ON IZ.	OPEN	Always	User needs to end the current session and start the new session to get the IZ back
2875	Sometimes Preference is just loading all time when we change any feature and click on Apply Changes	OPEN	Random	Close & re-launch the preference pane will resolve the issue
2882 - P2	Default values displaying for Color control/PTZ controls in PanaCast app instead saved values even after clicking on Refresh button after system restart	OPEN	Random	Unplug and Plug the camera to get the correct values
2027-P2	PanaCast driver not displayed when we Plug/Unplug camera multiple times	OPEN	Reproduce 1/8 times	Kill the VDC Assistant from Activity Monitor. Close & relaunch the Panacast USB for driver
2893-P3	PanaCast driver not displaying after multiple Unplug and Plugs, even after killing VDCAssistant also driver did not display	OPEN	Reproduce 1/10 times	Unplug and Plug the Camera
2480	PanaCast driver not displaying in Adobe Connect when we 1st launch the Adobe Connect and later connect the camera	OPEN (TBD)	Always	No workaround at this point of time. Could be an Adobe Problem
H/W				
2438	Solid white led (Instead of blinking blue LED) displaying on camera while upgrading from 50D950BB to latest 11.8 (F0.2.0.3 X0.3.1.14) version	OPEN	Always	Specific to camera & firmware utility version used for upgrade
